

## Issues with getting to 100% on coverage reports

- Product
  - Several getters and setters were written for ease of access for future more complex 'hero' features, but were not immediately in use for the current iteration of our product
- User
  - Exception class for adding to database was not triggered by tests because we did not have any exceptions triggered by the tests, since we fixed each error that might've triggered an issue with a test
  - One line for adding to database, which was triggered only if not test, was not triggered by our test coverage, but we were able to test this worked through manual tests to add things to the database
